

BUSINESS CONTINUITY AND DISASTER RECOVERY

WHAT DOES THIS MEAN TO YOUR HEALTH CARE FACILITY?

BC & DR

It is a common, but deadly mistake to use the term Backup (B/U) interchangeably with Disaster Recovery (DR). A mistake like this can cost your health care facility its data integrity, data availability, and will most definitely affect all modes of communication within its staff. Backup is the process of making copies of files to have a historical record of your facility's data, whereas Disaster Recovery is a set of procedures, hardware (computers, network, storage) and software (OS and applications) that enable your health care organization to restore operations in the case of a cyberattack, outage, or natural disaster. Both are equally crucial to have as an efficient health care provider as technology improves and as more and more medical and confidential data is transferred between staff members and their patients. Having both enables an effective Business Continuity plan, the assessment of your organization's IT enterprise as well as systemically identifying and eliminating single-points of failure. Developing an effective Business Continuity plan is not easy, however, a Managed Service Provider such as VPLS will ensure to provide your health care facility with the following:

- ▼ Backup as a Service (BaaS) allows VPLS to run your backups on our enterprise infrastructure
- ▼ VPLS's Disaster Recovery as a Service (DRaaS) adds the extra layer of actual hardware and software infrastructure to "stand up" your backup in our Data Center infrastructure in the case of an attack, outage, or natural disaster
- ▼ Assistance in helping your health care facility achieve and maintain HIPAA compliance requirements
- ▼ Guidance to elevate your health care facility from a CapEx to an OpEx IT finance model

Our team of highly-skilled Solutions Architects ensure to provide only the most reliable and robust Backup and Disaster Recovery plan for your health care facility, so contact us today!

ABOUT US
